

RetailMart Analytics Platform

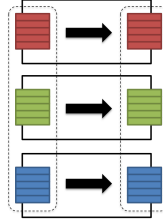

A retailer wants to analyze:

- 50 million sales records
 - Customer purchases
 - Product revenue
 - Regional revenue
- The Driver submits a job.

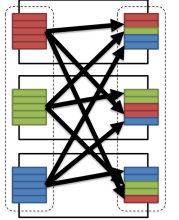

Narrow transformation

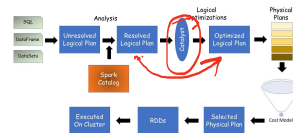

- Input and output stays in same partition
- No data movement is needed

Wide transformation

- Input from other partitions are required
- Data shuffling is needed before processing

② Run 2 Billion Rows
↓

② Filter count > 500
Region, count.
